I) Introduction to PACE Financing

A) What is PACE?

Property Assessed Clean Energy (PACE) enables property owners to finance improvements to their property. PACE offers a uniquely scalable solution for providing secure, low-cost capital for energy upgrades in commercial, industrial, and multifamily buildings, and it is now enabled in more than 33 states across the country.

DC PACE was created by an act of the Council of the District of Columbia in 2010 and is administered by Urban Ingenuity, working under contract to the District's Department of Energy and Environment (DOEE). DC PACE allows property owners to access financing for qualifying energy efficiency and clean energy improvements on their buildings and repay the investment through a special tax assessment. Like other benefit assessments, DC PACE is non-accelerating and the repayment obligation transfers automatically to the next owner if the property is sold. This arrangement spreads the cost of clean energy improvements – such as energy efficient boilers, upgraded insulation, new windows, or solar installations – over the expected life of the measure. DC PACE allows developers and property owners to overcome first cost barriers and install efficient equipment that pays for itself over the term of the special assessment.

PACE financing offers many benefits for both retrofit projects and new construction, including:

- Up to 100% financing for energy- and water-saving upgrades, including soft costs like energy audits and engineering;
- Annual savings that typically exceed annual payments, improving cash flows and net operating income;
- Increased asset value through improved cash flows and more efficient operations;
- Up to 20-year amortization at fixed or adjustable rates to enable deeper retrofits and reduce monthly costs for building owners;
- A form of financing that is potentially off-balance sheet as repayment is through a tax assessment that transfers with the property title, and is not tied to the credit of the property owner or developer; and
- Low-risk due to energy modeling and independent engineering validation.

B) Enabling Legislation

The statutory basis for DC PACE is contained in three pieces of legislation: The Energy Efficiency Financing Act of 2010, Green Finance Authority Establishment Act of 2018, and the Sustainable DC Act of 2012. The history of these laws is as follows:

The Energy Efficiency Financing Act of 2010, [Law 18-183](#), was introduced to the District of Columbia Council and assigned Bill No. 18-580. Signed by the Mayor on April 7, 2010, it was assigned Act No. 18-382 and transmitted to Congress for its review. DC Law 18-183 became effective on May 27, 2010.

The Green Finance Authority Establishment Act of 2018, Law 22-155, was introduced to the District of Columbia Council and assigned Bill No. 22-257. Signed by the Mayor on July 2, 2018, it was assigned Act No. 22-395 and transmitted to Congress for its review. DC Law 22-155 became effective August 22, 2018.

[Law 19-262](#), the "Sustainable DC Amendment Act of 2012," was introduced to the District of Columbia Council and assigned Bill No. 19-756. Signed by the Mayor on Jan. 16, 2013, it was assigned Act No. 19-615 and transmitted to Congress for its review. Law 19-262 became effective on Apr. 20, 2013.

C) About the Department of Energy and Environment (DOEE)

DOEE's mission is to improve the quality of life for the residents and natural inhabitants of the nation's capital by protecting and restoring the environment, conserving our natural resources, mitigating pollution, increasing access to clean and renewable energy, and educating the public on ways to secure a sustainable future. The agency's core responsibilities include, but are not limited to, enforcing environmental regulations; monitoring and assessing environmental risks; developing energy and environmental policies; issuing permits; and providing residents and local businesses with funding, technical assistance, and information on initiatives designed to ensure a more resilient and sustainable city.

D) About Urban Ingenuity

Urban Ingenuity is the private-sector program administrator (Administrator) for DC PACE. With special expertise in Property Assessed Clean Energy (PACE) financing and other public and private financing tools, Urban Ingenuity brings new capital resources to support deep energy efficiency retrofits of commercial and multifamily buildings, and to support the project development of clean-energy micro-grids, co-generation facilities, and solar installations. Urban Ingenuity assists building owners, property managers, investors and project developers, with the goal of cutting costs, enhancing financial performance, and funding capital improvement.

E) About the PACE Program Guidelines

This document may be amended or revised at any time by the District or by the Administrator with the approval of DOEE. At any time, the most current version of the document may be found at dcpace.com. Please ensure that you are viewing the most current edition by checking the date and version number on this document against the version posted at dcpace.com.

II) Eligibility Criteria

A) Property Eligibility Criteria: Is my property eligible for DC PACE?

In order to be considered eligible, the property must meet the following criteria. Both existing buildings and new construction projects are eligible. Any exceptions to these criteria must be approved by the District in their sole discretion and at all times subject to the constraints of the applicable law.

- The property must be located within the District.
- The applicant must be the legal owner of the property with clear and uncontested title to the property (and all legal owners of property agree to participate).
- The property must be a commercial, industrial, religious, or multifamily residential property (5 or more units). Single-family residential properties **do not** currently qualify for DC PACE.
- The property cannot be owned by the government (District Government, Federal Government, or foreign government). Publicly owned properties leased to a non-governmental entity via a long-term ground lease may be eligible.
- The property owner must be eligible to pay property taxes. (NOTE: Non-profit owners of commercial, industrial, and multifamily properties are eligible for DC PACE, regardless of whether or not they currently pay real estate taxes.)

- The property taxes and any other assessments or payments owed to the District must be current on the property, if applicable.
- The property owner must be current on all existing mortgages.
- The property must be clear of all notices of default or foreclosure in the past three years, or since acquired by current ownership, and cannot be subject to any involuntary liens or judgments.
- The property must be clear of any notices of foreclosure for the past 3 years, or since acquired by current ownership.

B) Project Eligibility Criteria: What kinds of projects can be financed through DC PACE?

1) Eligible Measures

Any measure that directly reduces utility costs or adds renewable generating capacity is eligible for DC PACE financing. In addition, DC PACE can finance measures that are substantially related to or necessary for the installation of these energy and water conservation measures (e.g. a new roof and/or structural modifications to support a solar installation). DC PACE can finance up to 100% of eligible projects, including both hard and soft costs.

Some of the PACE-eligible measures are provided below. This list is not exclusive or exhaustive, and other measures may be considered and approved by the Administrator:

- Chillers, boilers, furnaces, HVAC systems
- Hot water heating systems
- Lighting upgrades
- Combustion and burner upgrades
- Automated building and HVAC controls
- Variable speed drives (VSDs) on motors fans and pumps
- Fuel switching
- Heat recovery and steam traps
- Window replacements
- Building enclosure/envelope improvements
- Building management systems
- Energy storage
- Water conservation measures
- Green roofs, bioswales, permeable paving, green infrastructure, and other stormwater management measures
- Any measure or system that adds renewable energy capacity, including solar, wind, biomass, geothermal, fuel cells, co-generation, etc.
- Any measure that improves the resilience of the built environment and addresses risks from climate change identified in the Climate Ready DC Plan. These improvements may include flood protection measures, voluntary stormwater management strategies, green and energy infrastructure, energy storage, etc.

- Electrical vehicle charging, including infrastructure and related electrical upgrades
- Measures that enhance climate resilience, energy reliability, and/or grid security
- High efficiency commercial / industrial appliances that are substantially attached to the property (such as commercial kitchen equipment, industrial laundry equipment), including kitchen equipment in rental facilities that would remain with the building and not with the tenant
- Permitting, LEED certification, energy audits, engineering and design, energy modeling, Green Charrettes, staff training, and other soft costs related to the energy and water measures

Measures that are not typically eligible under DC PACE include:

- Cosmetic improvements (such as painting, new carpeting, etc. where measures serve no purpose to support energy and water conservation measures or the reduction of utility bills.)
- Non-commercial / industrial appliances (such as microwaves, non-affixed lighting, and other items not substantially affixed to the property). As noted above, appliances that provide significant energy or other utility savings and are functionally attached to the property on a long-term basis as in multifamily housing, industrial kitchens, or similar projects may be eligible.
- Acquisition, building demolition, or site prep work.

2) Other Project Eligibility Criteria

- The Project must be installed on a property within the District, attached with sufficient permanence to be reasonably considered part of the property from an assessment and lending perspective.
- The Project must meet all applicable codes and licensing requirements.
- The Project must be implemented by contractors licensed and insured appropriately (please see the Section IV: Technical Application Guidance for specific requirements of contractors) and meet Measurement and Verification requirements outlined in Section IV: Technical Application Guidance.

3) Savings-to-Investment Ratio Requirement

DC PACE requires that the technical application for all PACE projects specify a calculated Savings-to-Investment Ratio (SIR). The methodology for this calculation, including an explanation of supporting documentation required, is described in Section IV: Technical Application Guidance. SIR refers to the ratio of the value of the project savings over its lifetime to the total amount of PACE financing. In most cases, a project must have an SIR greater than one (i.e., the savings exceed the costs) for program approval. However, in certain cases, a project may be approved if the SIR is less than one.¹

Option 1: SIR > 1

For most projects, the savings from the project must be reasonably expected to equal or exceed the amount of the principal of, and interest on, the PACE financing. Savings may include reduced expenses on utility bills, operations and maintenance, and other monetized benefits, as approved by a DC PACE-approved Independent Engineer. In short, the SIR must be greater than or equal to 1. The applicant may consider either: the undiscounted value of the savings and the undiscounted value of the payments (i.e., both the numerator and

¹ DC Law 22-395, effective as of August 22, 2018, created the opportunity for DC PACE to finance projects with SIR of less than one.

denominator of the ratio are not discounted), OR, the net present value of the savings and net present value of the payments (i.e., both the numerator and denominator are discounted, and by the same discount rate). Please see Section IV: Technical Application Guidance for additional details.

Option 2: SIR < 1

In certain cases, the District may approve of projects that do not meet the SIR greater than one requirement. Specifically, these projects may be approved if:

- A. The property owner has acknowledged that the project does not have a positive SIR and has consented to move forward with an application and the project in full understanding of that fact, as demonstrated by their execution of Appendix D: SIR Waiver Form; and
- B. The project meets the public purpose of the PACE program, and in particular meets high standards of sustainability, energy efficiency, water efficiency, or water conservation. A project shall be approved to meet these standards if one or more of the following are true:
 - It meets or exceeds the requirements for LEED Gold or Platinum certification, Enterprise Green Communities standards, Passive House requirements, Living Building Challenge certification, or a comparable standard of leadership in sustainability and energy efficiency;
 - At least 50% of the PACE-financed measures (by cost) are eligible for incentives or rebates provided by the DC Sustainable Energy Utility, demonstrated by an executed Incentive Agreement;
 - The project is expected to exceed regulatory stormwater retention requirements, whether or not the owner expects to participate in the voluntary stormwater credit market; or
 - At least 50% of the PACE financing is being used to install renewable energy generation technology, energy storage, or other climate resilience measures. This includes, but is not limited to, solar PV, solar thermal, geothermal, co-generation, fuel cells, micro-grids, energy storage (such as batteries), electric car charging stations, flood plain or disaster threat mitigation efforts, and other measures that would promote climate resilience. The project may also include measures that are substantially related to the installation of renewable energy systems or energy storage, such as interconnection infrastructure in front of the electric meter (but physically located on and affixed to the property) if those investments allow for improved energy and environmental performance on the building site.

In the event of DC PACE programmatic approval of project improvements where the savings to investment calculation is less than one, all other criteria for PACE eligibility will still apply, including the underwriting criteria described below. Further, PACE financing can be used only for the PACE-eligible measures described in the “Eligible Measures” subsection above.

4) Underwriting Guidelines:

Prior to approval of the project, the property owner must demonstrate that the proposed project meets the following underwriting guidelines:

- Loan-to-Value: The ratio of total debt (PACE plus existing mortgages or other debt on the property) to the value of the property, as demonstrated by a recent appraisal, market study, or the tax assessed

value of the property, shall not exceed 80%. Exceptions to this guideline may be made with the approval of the PACE Capital Provider and the Administrator, subject to review and approval by DOEE.

- **PACE-to-Value:** The ratio of the PACE Assessment to the value of the property, as demonstrated by a recent appraisal, market study, or the tax assessed value of the property, shall not exceed 20%. If there is no existing debt on the property, the value of the PACE Assessment may be up to 35% of the property value. Exceptions to this guideline may be made with the approval of the PACE Capital Provider and the Administrator, subject to review and approval by DOEE.
- **Debt Service Coverage Ratio:** The property financials and post-rehab operation pro forma must demonstrate sufficient cash flows to pay the semi-annual PACE payments as determined by the PACE Capital Provider.
- **Lender Consent:** Any existing mortgage lenders must have provided consent to the property owner's participation in the program, as evidenced by their signature to the DC PACE Lender Consent Form.
- **Term of Financing:** The term of the financing shall not exceed the weighted average useful life of the installed equipment.

III) The PACE Application Process

Step 1: Prequalify

DC PACE is available for property owners and developers of office, multifamily, institutional, and industrial properties. To apply for DC PACE financing, the Property Owner or Capital Provider must submit the Preliminary Application (see Appendix A or [online](#)). In response, the Administrator will provide a Letter of Preliminary Eligibility confirming that the property meets DC PACE eligibility criteria, or a notice of why the property is not eligible.

Step 2: Assess

Work with your selected contractor or energy services provider to conduct an assessment of your building, identify potential energy conservation measures (ECM's), and define a scope of work (please see Section IV: Technical Application Guidance for information on assessment protocols). DC PACE maintains a list of approved Registered Service Providers on the dcpace.com website.

Step 3: Apply

Property Owners have two options to complete Step 3 (the PACE application).

1. **Option One:** Property Owner may work directly with one of DC PACE's registered Capital Providers to submit an application as outlined in the Application Checklist (Appendix C).
2. **Option Two:** Property Owner may submit a DC PACE Full Application to the Administrator (Appendix B), who will work with the Property Owner to source a Capital Provider that meets their preferences.

Option One: A registered PACE Capital Provider has been identified:

1. The Property Owner will work directly with the selected Capital Provider to submit a complete application as outlined in the Application Checklist (Appendix C).

Option Two: A PACE Capital Provider has not been identified, and the Property Owner would like to see a range of indicative terms:

1. Complete the DC PACE Full Application (Appendix B).
2. The Administrator will circulate a term sheet solicitation to registered Capital Providers, and all interested Capital Providers will have the opportunity to respond with indicative terms.
3. The Administrator will present the Property Owner with indicative terms for review.
4. The Property Owner will select their preferred Capital Provider, who will then undertake further underwriting and due diligence in order to present a term sheet for acceptance.
5. The Administrator will work with the Property Owner to facilitate the development of a complete application as outline in the Application Checklist (Appendix C).

Step 4: Administrator's Approval

Upon receipt of a complete Application, the Administrator will review all documentation and confirm that the Application meets all applicable criteria, including the Project Eligibility Criteria and Underwriting Guidelines (see Section II: Eligibility Criteria). Upon completion of this review, the Administrator will indicate that the project meets all applicable criteria by submitting an Approval Report to DOEE, which approval shall not be unreasonably withheld, thereby making it an Administrator Approved Project.

Step 5: Closing

1. The Capital Provider, Property Owner, or their contractor submits the required closing documentation, such as contractor certifications, and any contracts, if needed (see Section IV: Technical Application Guidance for further detail).
2. The District receives the Approval Report and reviews the PACE closing documentation. After review, the District indicates their acknowledgement of the Administrator Approved Project by entering into the PACE closing documentation.
3. The Property Owner executes the PACE Funding Agreement, PACE Agreement, and Memorandum of PACE Agreement and Special Assessment.
4. The Administrator records the Memorandum of PACE Agreement and Special Assessment in the land records of the District, thereby making it a Closed Project.

Step 6: Funding

1. Upon closing, the Capital Provider will make the funds available as agreed in the PACE Funding Agreement.
2. The Property Owner or their Contractor may begin construction and draw on the funds per the disbursement schedule agreed to in the closing documents. At the request of the Administrator, the Contractor(s) shall provide any reports (such as disbursement requests and commissioning reports) sent to the Property Owner or Capital Provider to the Administrator.
3. The Property Owner will make semi-annual PACE special assessment payments. The Office of Tax and Revenue (OTR) will send the Property Owner the semi-annual PACE Assessment bill according to the

normal property tax schedule. In most circumstances, the first PACE assessment payment will be due at the end of the next full half tax-year following the PACE closing. If the Property Owner does not receive a PACE Assessment from the Office of Tax and Revenue, please contact the Administrator. For more information on the District's tax billing cycle, please visit <http://otr.cfo.dc.gov/page/real-property-tax-bills-due-dates-and-delayed-bills>.

4. The Property Owner participates in Measurement and Verification or benchmarking as established in section IV: Technical Application Guidance.

IV) Technical Application Guidance

The Administrator is responsible for ensuring that all Applications meet the DC PACE program requirements. The following summary lists the Application components and technical review process and is designed to provide guidance to contractors who are preparing the technical component of the Application.

For more information about project eligibility criteria and what measures can be financed through PACE, please see Section II: Eligibility Criteria.

A) DC PACE Technical Application & Validation Process

Once the Administrator has screened a project for initial eligibility, the contractor and the Property Owner will gather the elements of the project, including work scope, costs, savings, energy modeling (if needed), and the various supporting documentation described below.

A complete technical application includes five main components:

- 1) **DC PACE Energy Audit Worksheet.** This worksheet (template available at dcpaace.com) summarizes the key project information including energy usage baseline and the costs, savings, and expected useful life associated with the selected measures. The information in this worksheet should be consistent with other documentation. The costs should match the costs presented in the construction contract(s), invoice(s), and the amount of financing requested, and the savings estimates should align with the estimates from the energy audit or model (as discussed in the Energy Audit / Energy Model section below). Explanations must be provided for any discrepancies. This worksheet is used by the DC PACE program to review the project's Savings-to-Investment Ratio.
- 2) **Energy Audit / Energy Model.** Provide the energy audit report or energy model report underlying the savings estimates presented in the DC PACE Energy Audit Worksheet. If the scope of work is known, applicants do not need to conduct a full energy audit of the property. Instead, an energy model demonstrating the savings from the specific measures identified is sufficient. In either case, the report should include information on inputs, assumptions, modeling software or approaches, etc. Alternatively, for boiler or other HVAC-only replacement projects, provide the Boiler Light Worksheet and short narrative project description, and for solar only (or solar and roof-only projects), provide the Solar Feasibility Worksheet and a short narrative project description. A full audit or modelling report is not typically needed for HVAC and solar projects.
- 3) **Supporting Documentation.** Provide supporting documentation sufficient for the Independent Engineer to understand and examine the assumptions behind the savings estimates. Supporting documentation should include, but not limited to, specifications for the selected equipment, feasibility studies, engineering, drawings and plans (if applicable), building permits received to date (if none, permits may be required as a condition of closing or of specific draws), as well as information regarding implementation (such as proposals or construction contracts). For solar projects, provide information

regarding the feasibility of the proposed solar project, such as a Helioscope or other layout and production estimate tool inputs and outputs and documentation of design approval by a licensed structural engineer.

- 4) **Utility Bills.** Include utility bills for at least 12 consecutive months (24 months is preferred), if available.
- 5) **Measurement and Verification Plan (M&V).** If the property does not already provide annual reporting through the District's Energy Benchmarking Program, the Property Owner or their contractor will comply with one of the following:
 - a. Benchmark their property using Energy Star Portfolio Manager, a free online tool, and share read-only access to their Portfolio Manager account with the DC PACE Administrator and DOEE. Property Owners may also use third-party software for benchmarking if it reports to Portfolio Manager. The DC SEU also maintains a list of benchmarking service providers active in the DC area, OR;
 - b. Conduct two years of M&V in accordance with International Performance Measurement and Verification Protocol (IPMVP). The M&V plan should be submitted as part of the technical application for approval to the Independent Engineer, who will confirm that it conforms with IPMVP standards. Annual reports for the two years of M&V should be provided to the DC PACE Administrator and DOEE.

For properties mandated to provide annual reporting under the District's benchmarking law, DC PACE requires no additional M&V, but the Property Owner will share read-only access to their account with the Administrator. In all cases, the Property Owner may choose a more rigorous M&V approach than is required (for example, they may choose to commission two years of M&V in addition to benchmarking). The PACE Capital Provider may impose additional requirements for M&V.

Completion of the technical underwriting portion of the Application is typically the responsibility of the contractor, engineer, energy auditor, or owner's agent.

B) Audit Level Selection

For complex multi-measure projects, the Administrator typically requires an ASHRAE Level II (or, in certain specific cases, an ASHRAE Level III) audit or energy model completed to equivalent standards. For simple single-measure projects a lower level audit may be appropriate.

- **ASHRAE Level I – A walk-through audit.** An analysis made to assess building energy efficiency to identify potential energy conservation measures (ECMs), appropriate for simple one or two-measure projects with readily determined costs and savings, such as lighting improvements or like-for-like equipment replacement.
- **ASHRAE Level II – An energy audit performed by an independent audit contractor.** A comprehensive analysis of the facility energy systems, energy use, and a quantitative evaluation of the ECMs cost and savings potential. This level of analysis can involve advanced on-site measurements and sophisticated simulation tools to evaluate the selected energy retrofits, and is appropriate for multi-measure retrofits whose savings and costs require more complex calculation. An evaluation of operations and maintenance costs savings (or increases) must be included in the analysis.
- **ASHRAE Level III – Investment-grade audit performed by independent auditor.** A detailed analysis requiring rigorous engineering study and appropriate for major capital investments. This

level of audit may be required for specific cases, e.g. multi-measure projects on new construction or for a building that will be substantially changing use.

C) Key Elements of the Energy Audit / Model

Regardless of the level of energy audit or energy model required, there are a few required data points that must be summarized in the energy audit worksheet and more fully explained and justified in the audit/model report and other supporting documentation:

- **Scope of Energy Conservation Measures** – List of the proposed ECMs, including description of the previously installed equipment (if applicable), schedule of equipment to be installed, and cost estimates for the proposed scope of work.
- **Expected Useful Life of ECMs** – Predicted lifetime of the proposed equipment and savings that they will generate – typically between 10 to 30 years for most pieces of equipment. Predicted Equipment Useful Life (EUL) should be based on ASHRAE (or other comparable industry standards) or manufacturer data, and the Administrator may request the source of the data. For further guidance on typical EULs, please see our external technical application resources.
- **Energy Baseline** –The energy savings will be calculated against a baseline, which will be documented as follows:
 - If baseline energy use data is available for the property, the contractor should provide:
 - Identification of the baseline period;
 - Baseline energy consumption and demand data, including recent copies of all major use account billings;
 - All independent variable data coinciding with the energy data, if applicable (e.g. changes in occupancy, weather data, ambient temperature, etc.);
 - All static factors coinciding with the energy data (e.g. occupancy, utility rates, etc.); and
 - Details of baseline data analysis performed (if applicable), e.g. analysis, weather normalization, any other adjustments (such as adjustments needed to reflect expected changes in occupancy, or to create a code-compliant baseline if the building currently does not meet applicable DC building codes).
 - If historical utility data is not available, the technical application should establish a baseline as described below:
 - For *existing buildings* where there is historical energy use but data are not available (for example, because of a change in ownership, or because the building is individually metered), the baseline should correspond to the modeled energy use of the building with the current equipment and appropriate assumptions about occupancy and usage based on the specific property. For multifamily buildings that are individually metered, it is preferable that historical data are acquired from a sampling of units to confirm the modelling.

- For *existing buildings* where there are no historical data available (for example, if the building has been vacant for several years), the baseline building performance should be calculated based on existing equipment, and where needed, assumptions about the efficiency of equipment that would have been installed given the date of construction or last renovation. Assumptions about occupancy may be based on previous or planned future use.
 - For *new construction* projects, the technical application should include a baseline consistent with the baseline established for LEED accreditation (for example, LEED v4 requires that baseline building performance is calculated according to ANSI/ASHRAE/IESNA Standard 90.1–2010) or in accordance with current or expected DC building code.
- **Estimated Savings** – The energy audit should project estimated savings to the property over the expected useful life of the equipment. DC PACE may consider savings from the following categories:
 - **Utility Savings:** Estimate of annual savings on electricity, gas, or water bills that will result from the proposed scope of work.
 - **Operations & Maintenance Savings:** Net avoided spending on operations and maintenance attributable to the new equipment, including costs of labor, spare parts, service contracts, etc. This may include annual savings or may only apply in some years during the life of the equipment.
 - **Avoided Capital Costs:** DC PACE will allow a portion of the capital cost of new equipment to be considered savings, if the equipment to be replaced is nearing (or past) the end of its useful life. A property owner typically sets aside money each year in order to pay for the eventual costs of system replacement. By paying upfront to replace systems before they fail, the owner is 'saving' in future years what they would otherwise need to be setting aside. The amount that can be included in the avoided capital costs category must be multiplied by the ratio of remaining useful life to total useful life of the equipment being replaced.
 - **Avoided Fees or Penalties:** Some projects may include future requirements such as waste disposal, wastewater treatment, pollution abatement, stormwater retention, etc. If these requirements are associated with environmental or energy regulations, the avoided future costs or penalties may be counted as a savings.
 - **New Revenues:** Revenues earned from solar plants, cogeneration, geothermal, wind, waste-to-energy, and certain other projects that generate renewable energy revenues, including ancillary services (such as PJM RegD market revenues) may be counted as savings.
 - **Project Financial Savings:** Where the installation of energy or water conservation measures makes a project eligible for DC PACE, and where the PACE funds can be demonstrated to displace higher cost capital resources, the resulting differential cost of capital for financing those improvements can be considered as a direct economic benefit resulting from the PACE project. These “Project Financial Savings” can be used when calculating the total stream of savings and other project benefits resulting from the PACE improvements for the purpose of sizing the PACE note and other

underwriting and analysis of total project benefits. Financial savings are subject to the review and approval of the Administrator, the District, and the selected Capital Provider. The project must meet all other underwriting constraints (including Loan-to-Value (LTV) and Debt Service Coverage Ratio (DSCR) criteria).

- **Other Monetized Benefits:** Tax credits (Investment Tax Credit, accelerated depreciation), Solar Renewable Energy Credits, utility incentives and rebates, or other monetized benefits that are demonstrated to be reasonably expected to accrue to the Property Owner may be counted as savings.
- **Methodology** – Summary of the assumptions underlying the model, calculations, and the methodology used. DC PACE will accept both industry standard and proprietary energy audit analysis models.

D) Validation Process

The technical application must be reviewed by an approved Independent Engineer. The Independent Engineer shall be a licensed Professional Engineer (or equivalent if approved by the Administrator) with energy and water efficiency experience and with no other involvement in the project. The Independent Engineer should have at least one of the following certifications:

- American Society of Heating, Refrigeration, and Air-Conditioning Engineers (ASHRAE)
 - Building Energy Assessment Professional (BEAP)
 - Building Energy Modeling Professional
- Association of Energy Engineers (AEE)
 - Certified Energy Manager (CEM)
 - Certified Measurement and Verification Professional (CMVP)
 - Certified Energy Auditor (CEA)
- Building Commissioning Association
 - Certified Commissioning Professional
- Building Performance Institute
 - Energy Auditor
- Investor Confidence Project
 - Credentialed Quality Assurance Provider

Either the Administrator or the Capital Provider will make arrangements for the validation process. The technical review will result in a validation report that confirms that the engineering and energy savings analysis, Effective Useful Life (EUL) estimates, construction cost estimations, ECM, and capital improvement recommendations (if applicable) are appropriate and reasonable and meet the current requirements of DC PACE. The technical review will confirm the appropriate lifetime savings resulting from the project that may be used to determine the project's conformity with DC PACE Savings-to-Investment Ratio requirements, as well as the total eligible project costs. In considering the non-technical savings such as tax benefits or new revenue stream), the independent reviewer may rely on assumptions provided by the Property Owner or Capital Provider. The technical review will also include an assessment as to whether the methodology (including appropriateness of modeling software and other tools) and assumptions used in estimates are reasonable.

E) Additional Closing & Post-Closing Requirements

Once the Administrator and the District have approved a project, the following items will be required prior to the closing:

- **Signed Construction Contract(s)** – If an executed construction contract was not provided as part of the documentation submitted for third-party technical review, it must be provided prior to the Administrator’s approval. Contracts must cover all work necessary to complete the installation of funded improvements.
- **Contractor Qualifications** – All subcontractors must submit the following items prior to project closing. The PACE Capital Provider may have additional requirements for contractor due diligence.
 - Licensing and certification information (if not covered in the construction contract)
 - Proof of insurance, with property owner listed as additional insured (if not covered in the construction contract)
 - Evidence of bonding capacity, if required by the Capital Provider and Property Owner
 - Three references for comparable work or case studies (if the Contractor is not already a DC PACE Registered Service Provider)

After disbursement and construction completion, the following are required pursuant to the PACE Closing Documents:

- **Completion/Commissioning Documentation:** The contractor should provide a commissioning or equipment start-up report. Please also provide any permit inspection reports, final invoices, lien waivers, or other documentation demonstrating the successful completion of the project to the Program Administrator.
- **M&V:** Provide M&V reporting as established in the M&V plan.

V) Program Fees

One-Time Fees			
Fee	Amount	Recipient	Details
Application Fee	\$250	Administrator	All projects – with Complete Application
Program Administration	1.25% (minimum \$2,500)	Administrator	All projects – at closing
Loan Sourcing and Project Development Fee	0.75%	Administrator	Waived if the Property Owner submits a Complete Application to the Administrator (i.e., does not require term sheet solicitation or lender consent support).
Recording Fee	\$31.50	Recorder of Deeds	All projects – At closing

Transaction Fees: In addition to the program fees outlined above, the property owner may also be required to pay lender’s origination, transaction, and legal fees, along with costs for the technical validation by an Independent Engineer.

Capitalization of Fees: All program fees may be capitalized into the PACE financing and paid at closing.

Permanent Servicing Fees			
Fee	Annual Amount	Recipient	Details
PACE Servicing (Administrator)	0.15% of original principal	Administrator	All projects
PACE Servicing (District)	0.05% of original principal	District	All projects
Payment Processing Fee	\$250.00 per year	Paying Agent	All projects

VI) Participating in the DC PACE Program

A) Contractors and Service Providers

If you are a contractor, energy service company, engineering or consulting firm, or expert in mechanical systems, solar installation, architecture or design, DC PACE can help you meet your client’s needs.

Contractors can register with DC PACE to help manage energy retrofit projects according to PACE underwriting standards, and support DC PACE financing applications. Registered contractors are listed on our website, where we direct property owners and developers looking for contractors. In addition, registered contractors may request co-branded DC PACE marketing materials to share with clients, listing them as a registered contractor of DC PACE.

To become a DC PACE Registered Contractor, applicants must:

- Be in good standing with regard to licensing applicable to the trades proposed; qualified to do business in DC; hold any other necessary permits, certificates, registrations, and approvals.
- Fill out the [DC PACE Contractor Registration](#) form and submit supporting documentation, including three references or case studies.
- Attend a contractor training within six months of registration. Regular DC PACE contractor trainings are held quarterly. Contractors may also contact the Administrator to schedule individual trainings for their company.

B) Capital Providers

Banks and other investors can originate private financing into clean energy projects secured by a DC PACE assessment and collection on property tax bills by the District’s Office of Tax and Revenue. PACE assessments offer a highly secure asset backed instrument for guaranteeing stable yields to investors in clean energy projects. PACE assessments are used to fund projects that produce annual energy and other savings for the building owner in excess of the annual cost of the special assessment; in most cases providing excess cash flow to the investor.

Because PACE financing is attached to the building (not the building owner), and can be amortized for up to 20 years, PACE greatly improves project-level economics for the property owner, reduces risk for investors, and increases demand for financing of clean energy projects within regional markets. Primary mortgage lenders and other investors can also utilize PACE to leverage additional capital investment into properties that need energy upgrades.

DC PACE is continually expanding the roster of Registered Capital Providers. Any lender must be registered with DC PACE in order to fund projects in the District. In addition, Capital Providers are eligible to receive indicative terms from the Administrator on particular projects, and will be listed on the DC PACE website. To become a qualified Capital Provider, applicants must:

- Review the DC PACE Program Guidelines, Standard Offer, closing documentation, and other relevant information

- Submit a Capital Provider Registration Form, which includes confirmation that they have reviewed the items listed above and make a good faith affirmation that they are ready and able to transact within the program

Please contact the Administrator if you are interested in becoming a Registered Capital Provider.

VII) Frequently Asked Questions

Q: Can I use DC PACE for new construction projects?

A: Yes. Please see Section IV: Technical Guidance, for more information on specific application instructions for new construction and substantial rehabilitation projects.

Q: Is DC PACE compatible with incentives and rebates from the DC Sustainable Energy Utility (DC SEU) and other utility incentive programs?

A: Yes, DC PACE is compatible with all utility incentive programs and applicants are encouraged to take advantage of as many rebates and subsidies as possible. The Administrator can help connect property owners to SEU resources. NOTE: The Administrator is not liable for any loss of or change to a rebate or tax credit.

In most circumstances, DC PACE is compatible with the following financing structures and programs:

1. Solar Incentives: property owners may retain all rights to any available Investment Tax Credits (ITCs) and Solar Renewable Energy Certificates (“SRECs”) for qualifying renewable energy projects. Property owners should consult with their tax advisors and/or accountants as to the applicability of any federal tax credits to their personal tax situation.
2. Weatherization Assistance Program funds.
3. Federal, State, or Utility Rebates: All available federal, state, or utility rebates that are assignable to the property or an eligible contractor are compatible with DC PACE financing.
4. Power Purchase Agreements: DC PACE financing may include a Power Purchase Agreement (PPA) or similar third-party ownership financing structure for solar energy or other clean energy installation, or may provide financing for a prepayment of such a PPA. The Administrator may require the review and approval of any PPA documentation to ensure it conforms to DC PACE requirements.
5. Tax-Exempt PACE: DC PACE can accommodate both taxable and tax-exempt funds to finance PACE-secured building improvements.
6. Tax Credit and Bond Financing: PACE may be used on properties financed with Low Income Housing Tax Credits, New Markets Tax Credits, or other related forms of financing, and may be used in conjunction with other DC bonding programs such as the Industrial Revenue Bond Program.

Q: Can I start construction on a project before closing on PACE financing?

A: Yes; however, interested applicants are encouraged to seek approval from the program Administrator and close on PACE financing before starting construction. At minimum, the Property Owner should submit a Preliminary Application and receive a Letter of Preliminary Eligibility prior to beginning construction on the PACE project (or PACE-eligible project components, if PACE is to be part of a larger project). Construction may then proceed in parallel with the remainder of the PACE approval process. On a case by case basis, DC PACE may also approve new applications for projects that have already begun construction. However, property owners are advised that until

an application has been submitted and approved, there is no guarantee that the project will be approved. In addition, prior to closing, there is no guarantee that a Capital Provider will provide the PACE funds.

Q: Can I use DC PACE to refinance an energy project that is already complete?

A: Yes, PACE may be used to refinance PACE-qualifying projects under certain circumstances. Guidance for determining PACE eligibility, qualifying investments, and calculating the Savings-to-Investment ratio will all be established on a project by project basis and is subject to DOEE's approval. Please contact the Administrator early in the project development process to discuss PACE funding for refinancing projects.

Q: I lease my property through a long-term ground lease. Am I eligible to apply for PACE financing?

A: Yes, the lessee of a property that is leased through a long-term ground lease, including a ground lease for a property that is owned by the District or another public entity, is eligible for PACE financing and can be treated as the property owner for PACE underwriting purposes if the following conditions are met:

- The term of the PACE financing does not exceed the remaining term of the ground lease, and
- There are no terms and conditions in the ground lease that would prevent the property owner from taking on a voluntary special assessment or otherwise participate in DC PACE.
- If applicable, the ground-lessor consents to the PACE assessment, similar to the consent required of existing mortgage-holders

Q: Are buildings owned by religious organizations eligible for DC PACE?

A: Yes, PACE financing is available to all eligible building owners in the District regardless of whether the building is owned by a religious institution. DC PACE financing is available for qualifying physical improvements to the buildings of a religious institution on the same basis as for the financing of improvements to the buildings of other organizations within the District. Religious institutions are eligible to participate in District programs, including DC PACE, that are generally available to the public.

- Project budget / schedule of values
- Energy audit, solar feasibility study, or boiler lite worksheet (please contact the program administrator if you are unsure which requirement applies)
- DC PACE Energy Audit Worksheet (template available online)
- Minimum 12 months of utility bills, 24 months preferred

- M&V Plan covering commissioning and two years post-installation
- Supporting materials, such as selected bids, equipment spec sheets, plans, etc.

Applicant Representations

By submitting this application, applicant certifies that:

The above and attached information is true and correct to the best of their knowledge.

Property Owner has clear title to the real property and the authority to enter into the agreements necessary for PACE financing.

The Program Administrator is authorized to share basic property and project information with capital providers in order to solicit indicative terms.

The Program Administrator is authorized to work with the Property Owner in engaging with existing lenders in order to secure lender consent.

Appendix C: Project Approval Checklist

As applicable, the following items must be included in a Full Application:

1. The project application fee of \$250.
2. Title search of property seeking financing, to be commissioned by the PACE capital provider, within 60 days of closing.
3. Appraisal or market study conducted within the last three years, **if needed**, to demonstrate that the project meets the DC PACE underwriting criteria.
4. A complete technical application as described in the Section IV of the Program Guidelines.
5. A validation report signed by an approved Independent Engineer, listing the Energy Conversation Measures (“ECMs”) demonstrating that the energy project was evaluated consistent with the standards outlined in the Program Guidelines.
6. A signed construction contract or contracts and contractor qualifications as outlined in Section IV of the Program Guidelines
7. If applicable, an SIR Waiver Form (see template in Appendix D)
8. A disclosure of risk form signed by the Property Owner (see template in Appendix E).
9. If applicable, a lender consent form signed by any mortgage holders.
10. Most recent mortgage statement.
11. A valid and signed term sheet with the PACE Capital Provider.
12. Agreement to Program Terms (see template in Appendix F).
13. Property financials, as listed below, OR an affidavit signed by the Capital Provider affirming that they have assessed the Property Owner’s ability to cover their debt service in a manner consistent with a commercial mortgage. The affidavit shall also provide the Debt Service Coverage Ratio (DSCR) (pre-retrofit and estimated post-retrofit), as well as the Loan-to-Value and PACE-to-Value ratios. In all cases, the District and the Administrator reserve the right to request original financial documents, including:
 - Three years of audited financial data;
 - Year to date introductory financials, if available;
 - Operating pro forma;
 - Rent roll, if available;
 - Most recent mortgage statement.
14. Board resolution and organizational documents of the Property Owner, if applicable.

After project completion, please provide:

1. Commissioning report and other completion documentation, as described in Section IV of the Program Guidelines.
2. M&V reports as required.

Appendix D: SIR Waiver Form

DC PACE Savings-to-Investment Ratio Waiver Form

WHEREAS, the property owner of the property located at [address and SSL] (Property), intends to participate in the DC Property Assessed Clean Energy (DC PACE) program and has applied for PACE financing to support a project generally consisting of [XX measures] (Project) at the Property.

WHEREAS, in accordance with DC PACE requirements, an energy audit, energy model, or feasibility study has been performed for the Project, and such study concludes that the expected value of the savings from the project is **not** reasonably expected to equal or exceed the amount of the principal of, and interest on, the PACE financing, i.e., the savings-to-investment ratio (SIR) is not greater than one.

WHEREAS, Property Owner desires to proceed with closing on the PACE financing pursuant to the term sheet with their selected Capital Provider and implementation with the Project, in full understanding that the project SIR is less than one.

NOW, THEREFORE, the Property Owner acknowledges:

1. The savings-to-investment ratio of the Project is not greater than one and the savings that may accrue from the Project are not expected to exceed the principal and interest on the PACE financing, and the Project savings will not fully offset the PACE Assessment payments.
2. The Project meets high standards of energy efficiency or water efficiency or stormwater retention standards or other sustainability measures, as demonstrated with its compliance with the following criteria outlined in the DC PACE Program Guidelines: [Please specify].
3. The Project meets the public purpose declared in Section 102 of the Energy Efficiency Financing Act of 2010, which is to address the issue of global climate change and to reduce the consumers' energy costs.

Agreed and acknowledged:

Property Owner

Name: _____

Title: _____

Appendix E: Risk Disclosure Form

DC PACE Disclosures of Risks

As a Property Owner participating in the DC PACE Program, you should consider carefully the risks associated with accepting PACE financing and the Special Assessment on your property. These risks include, but are not limited to, the following:

- 1) Special Assessments are secured by and attached to the real property. Upon closing, the PACE Assessment Memorandum will be recorded and the property will be subject to a Special Assessment. A lien for unpaid installments of the Special Assessment, including penalties and interest, shall attach to the Property in the same manner and with the same priority and collection procedures as a lien for delinquent real property taxes under Title 47 of the District of Columbia Official Code. The result could ultimately be a tax sale if the delinquent payments are not made.
- 2) Neither the Program Administrator nor the District is your lender. The Administrator's role in this transaction is to administer the DC PACE Program and ensure that projects meet all of the applicable eligibility requirements.
- 3) The Property Owner has been made aware of the interest rate and any prepayment penalties associated with the PACE financing, including any fees charged by the Administrator, the District, and the District's Paying Agent.
- 4) The Property Owner is aware of the risks associated with variable interest rate financing, if applicable.
- 5) An Independent Engineer has reviewed the project costs and estimated savings to confirm that they are reasonable. However, that review is limited to a reasonable professional judgment based on the information made available and various assumptions. The Property Owner is aware that neither the Independent Engineer, the Administrator, nor the District guarantees energy savings.
- 6) The energy efficiency and renewable energy measures proposed to be installed on the property may not perform to specification. They may break down or underperform due to technical malfunction or improper installation. Project success often depends on selecting parties capable of installing and managing projects and structuring contracts that provide appropriate protection against these construction and operational risks. The Administrator recommends Property Owners have their installation and servicing contracts reviewed by competent legal counsel and engineering consultants prior to execution.
- 7) The Program will require that contractors meet certain minimum requirements, however, neither the Administrator nor the District: (1) endorses the workmanship of any contractor; nor (2) guarantees, warranties, or in any way represents or assumes liability for any work proposed or carried out by a contractor. Additionally, the Administrator is not responsible for assuring the design, engineering, and construction of the project is proper or complies with any particular laws, regulations, codes, licensing, certification and permit requirements, or industry standards. The

Administrator does not make any representations of any kind regarding the results to be achieved by the project or the adequacy or safety of such measures.

- 8) Completed projects require ongoing maintenance to meet projected savings and sustain equipment performance. Such maintenance could be complex, costly, and/or be beyond the capabilities of “in-house” staff, requiring external expertise or specialized services over the life of the measures.
- 9) Fluctuations in energy or water prices may increase or decrease the savings associated with your project. Your project’s estimated savings are based on assumptions about the future price of electricity and fuels.
- 10) Changes in property occupancy may increase or decrease the savings associated with your project. Your project’s estimated savings are based on assumptions about the future occupancy and uses of your property.
- 11) Changes to federal or local policies and incentives may impact the economic benefits of your project. Such policies may include governmental initiatives, laws, and regulations designed to reduce energy usage, encourage the use of clean energy or encourage the investment in and the use of sustainable infrastructure, utility rebates, and renewable energy credits. Incentives provided by the Federal government may include tax credits, tax deductions, bonus depreciation as well as federal grants and loan guarantees. You may be depending on these policies and incentives to help defray the costs associated with, and to finance, your project. Government regulations also impact the terms of third-party financing provided to support these projects. If any of these government policies, incentives or regulations are adversely amended, delayed, eliminated, or reduced, the economics of your project may be harmed.

Now, therefore:

Property Owner hereby acknowledges the above described DC PACE disclosure of risks by and through its duly authorized undersigned representative.

Property Owner hereby disclaims, releases and forever discharges the Administrator and the District from any and all actions, causes of actions, claims and demands for, upon, or by reason of any damage, loss, or injury, which hereafter may be sustained by Property Owner for participating in the DC PACE Program.

Property Owner:

Appendix F: Agreement to Program Terms Template

[Property]
Agreement to Program Terms
 [DATE]

Thank you for providing DC PACE with the opportunity to provide [Property] with a credit facility of \$XX through a Property Assessed Clean Energy (“PACE”) Assessment. The following is a summary of the program requirements for the credit facility which is made pursuant to the authority of the District of Columbia Code, Title 47, Chapter 8 (the “Statute”).

This is neither a commitment to lend nor a guarantee of approval by DC PACE but describes proposed terms for discussion purposes. This document is a Program Agreement with DC PACE and is not the term sheet for your PACE financing. Please see the term sheet presented by your Capital Provider for additional terms and conditions. You must sign both documents for the Administrator to move forward with review and approval of your PACE application.

This document does not purport to summarize all terms, conditions, representations, warranties and other provisions that may be contained in the PACE financing documentation. In the event that the Property Owner accepts this Agreement to Program Terms but ultimately does not close financing offered to it pursuant to this Agreement to Program Terms, Property Owner agrees to reimburse the Program Administrator for any and all third-party expenses incurred in connection with the Program Administrator’s application review process, such as for commissioning an Independent Engineer’s review of your technical application.

Property Details:

Property Name:	[Name] (the “Property”)
Location:	[Address]
Property ID	[District of Columbia Office of Tax and Revenue Square and Lot]
Property Owner:	[Name and Address]

PACE Financing Terms:

PACE Funds:	PACE funds shall be provided for approved costs including to (a) finance clean energy, water conservation, energy efficiency, and other related retrofits to the Property and (b) pay costs of obtaining and closing that credit facility, subject to the capital provider’s approval.
--------------------	--

Funding Amount:	\$XX
PACE Capital Provider	[Bank Name and Address]
DC PACE Administrator:	Urban-Energy Advisors, LLC d/b/a "Urban Ingenuity"
PACE Administration Fee:	Property owner agrees to pay the PACE Administration fee, which will be [2.00]% of the project costs, payable to the PACE Administrator at closing. This fee may be capitalized into the PACE financing or paid directly at the time of closing.
Third-Party Expenses:	Property owner agrees to pay any additional closing costs incurred by the Program Administrator, including but not limited to costs of the technical review, legal costs, and the costs of recording the Special Assessment. If the property owner accepts this agreement but does not close on the PACE financing, property owner must reimburse the Program Administrator for any third-party expenses incurred in the review of their application.
Annual PACE Program Fee:	The annual program servicing and administration fees will be 0.20% of the original principal, of which 0.15% is due to the PACE Administrator and 0.05% is due to the District. These fees will be added to the semi-annual PACE payment.
Annual PACE Servicing Fee:	\$250 due to the District's Servicer. These fees will be added to the semi-annual PACE payment.
Ongoing M&V:	The property owner agrees to comply with DC PACE ongoing measurement and verification requirements as described in the Program Guidelines.
Public Information:	The property owner understands that certain basic details about DC PACE projects may be made public by the Administrator or the District in case studies or other material. Such information would include the appx. project location, building type, project measures, PACE Capital Provider, and approximate financed amount. No confidential information or financial details would be included in any such material.

Additional Program Terms and Conditions:

Special Assessment:	Repayment is made by the Property Owner through a Special Tax Assessment on the property (the "Special Assessment") that will be collected with the property taxes.
Payment Mechanics:	The Property Owner will pay the Special Assessment to the District of Columbia tax collector semiannually no later than March 31 and September 15 of each year; the same due dates for semiannual property taxes.

Penalties:	A lien for unpaid installments of the Special Assessment, including penalties and interest, shall attach to the Property in the same manner and with the same priority and collection procedures as a lien for delinquent property taxes under Title 47 of the District of Columbia Official Code. Special Assessment liens shall be in priority immediately junior to delinquent property tax liens, but senior to all other liens and subject to assignment under District delinquent tax lien policy for Special Assessments.
Property Owner Covenants:	<ul style="list-style-type: none"> • Pay all liabilities when due • Notify the PACE Administrator of any litigation that will have a material adverse effect to the Project or the financial condition of the Property or Property Owner • Pay all Special Assessments and property taxes when due • Maintain its existence at all times • Comply with all applicable laws at all times • Any other covenants as specified by the PACE Capital Provider
Conditions Precedent	<ul style="list-style-type: none"> • Receipt of Complete Application as established in the Program Guidelines, including satisfactory documentation demonstrating that the property meets programmatic loan-to-value, PACE-to-value, and Debt Service Coverage Ratio (DSCR) requirements • Receipt of additional Closing Requirements as outlined in the Program Guidelines • Approval of the imposition of the Special Assessment by the Board of Directors of the Property Owner, if applicable • Approval and execution of the PACE Closing Documents as outlined in the Program Guidelines • Other conditions as specified by the PACE Administrator or the PACE Capital Provider
Lender Consent:	All mortgage lenders must consent to the Special Assessment.

If the terms and conditions described above are acceptable, please so indicate by signing this agreement.

Sincerely,

 Bracken Hendricks
 CEO, Urban Ingenuity
 DC PACE Program Administrator

ACCEPTED.
